RELATIVE STRENGTH · 30 DAYS VS BENCHMARK

Each sector index's change over the past 30 days minus the change of the Pokémon Market Index over the same 30 days (−4.35%), in percentage points. The 7-day difference is shown for context. A sector without a 30-day reading is listed but not ranked.

Over the past 30 days the Pokémon Market Index is −4.35%, the benchmark for this ranking. The Vintage Index was the strongest sector at +3.31%, +7.7 pp against the benchmark, followed by the Mid Era Index at +2.27% and the Sealed Classic Index at +1.63%. The weakest was the Illustration Rares Index at −14.3%, −10.0 pp against the benchmark, with the 151 Index at −12.1% and the Modern Index at −10.1% just above it. The leading sector gained outright over the period, with 52% of its constituents higher on the week.

METHODOLOGY

Every index starts at 1,000 points at inception and chains daily basket returns, with constituents selected by fixed liquidity and price-history rules, liquidity-adjusted weights capped at 12.5% per card and compositions reviewed quarterly. Index levels are computed once daily from the market prices of a major US card marketplace, quoted in USD with Near Mint as the reference condition. The full methodology is at pokemarketindex.org/methodology.

Index figures are computed once daily from observed market prices, quoted in USD with Near Mint as the reference condition. The shortest horizon reported is the week. Nothing in this report is investment advice.
